PLACE ACQUIRED		REFERENCES		25X1

This is UNEVALUATED Information

THE SOURCE EVALUATIONS IN THIS REPORT ARE DEFINITIVE.
 THE APPRAISAL OF CONTENT IS TENTATIVE.
 (FOR KEY SEE REVERSE)

1. Only one liquid fuel depot has been identified in the area of Obluze and its immediate neighborhood; it is located on the northwest slope of Hill 63, which is between the roads: Obluze - north Oksywie and Obluze - south Oksywie.
2. Four tanks are visible in this area. They are situated near each other, and covered with earth so that they look like small hillocks with flattened tops. Each has a diameter of 20 meters at the base and approximately 12 meters at the summit. A trap door and ventilators can be seen on top of every tank. The "hillocks" are overgrown with grass and bushes.
3. From the south and west the store is surrounded by a wall and the whole place is guarded by a sentry posted on top of one of the hillocks.
4. Near the tanks is an oblong building, approximately 25 meters long. Large gates are visible in the low walls of the building. A railway spur has been laid as far as the building, which it enters through one gate, and terminates at the opposite gate. At the time of observation three railway tank cars could be seen on this siding and practically occupied its whole length.
5. A permanent gasoline pump can be seen near the building. No pipeline leading from the depot area is visible. If there is one, it must run underground, but there is no indication of its existence.
